Project Objective

INX Future Inc. is a leading data analytics and automation solutions provider with a global business presence. The company has experienced concerns regarding employee performance indexes and management requires data driven insights to understand the factors associated with employee performance.

The objective of this project is to analyze employee performance data for INX Future Inc. and develop a machine learning model capable of predicting employee performance ratings.

Business Requirements

The analysis should provide the following:

- Analyze employee performance across different departments.
- Identify the top three factors that influence or contribute to employee performance.
- Develop a machine learning model that can predict employee performance based on employee-related factors.
- Provide recommendations that can help INX Future Inc. improve employee performance.

Technical Requirements

The project should include:

- Data loading and understanding
- Data cleaning and preprocessing
- Exploratory Data Analysis
- Feature selection and engineering
- Machine learning model development
- Model evaluation and comparison
- Feature importance analysis
- Employee performance prediction
- Data visualizations
- Project analysis and summary

Expected Deliverables

The project should contain:

- Data processing notebook
- Exploratory Data Analysis notebook
- Model training notebook
- Prediction notebook
- Visualization notebook
- Project Analysis
- Project Summary
- Source/reference materials
- Raw and processed datasets
